## Switching Power Supply

S82J

## Compact and Economical Switching Power Supplies with Capacities Up to 600 W

- Power range from 10 W up to 600 W .
- Output Voltages: 5 V , $12 \mathrm{~V}, 15 \mathrm{~V}$, or 24 V .
- Wide AC input range

50-/100-W, 24-V output models: 100 to 240 VAC on one body $150-\mathrm{W}$ models: 100 or 200 VAC selected automatically $300-/ 600-\mathrm{W}$ models: 100 or 200 VAC selectable
■ Open-frame and covered types available.
■ Top terminal- and connector-type available in addition to front terminal type (100-/150-W models).
■ Mounting brackets provided for mounting to control panels.
■ Easily mounted to DIN track with S82Y (sold separately).

- Maintenance-free up to 300 W due to natural ventilation.
- Protection-ON alarm indicator shows valuable protection functions in action (300-/600-W models).

■ Conforms to EMC standards: EN50081-2 and EN50082-2.
■ With an external filter, achieves conformance to EN50081-1 for universal usage on EMI (300-/600-W models).
■ Finger protection terminal block to meet VDE0106/P100 (50-/100-/150-W, 24-V output, covered type)
■ Class 2 approved ( $50-\mathrm{W}, 24-\mathrm{V}$ output models)

- The UL Listed Power Supplies (50-/100-/150-W, $24-\mathrm{V}$ output models) can be used at full rated power at any location.
■ Approved by UL/CSA standards, EN60950, and EN50178 (VDE0160).
■ Six-language instruction manual provided.

## Ordering Information

## Model Number Legend:

## 50 (24 V)-/100-/150-/300-/600-W Models

4. Input Voltage

1: 100 VAC
2: 200 VAC
None: 100 or 200 VAC, selectable (for $300-/ 600-\mathrm{W}$ models)
100 or 200 VAC, selected automatically (for $150-\mathrm{W}$ model)
100 to 240 VAC (for $50-/ 100-\mathrm{W}, 24-\mathrm{V}$ output models)
10-/25-/50 (5, 12 V )-W Models

1.Input Voltage/Configuration

0: 100 VAC/Open-frame type
2: 200 VAC/Open-frame type
5: 100 VAC/Covered type
6: 200 VAC/Covered type
2. Power Ratings

1: 10 W
2: $\quad 25 \mathrm{~W}$
5: 50 W

## 3. Configuration

A: Open-frame type, front terminals
B: Open-frame type, top terminals
C: Open-frame type, connector
D: Covered type, front terminals
E: Covered type, top terminals
F: Covered type, connector
N: Without Mounting Brackets
None: Enclosure type, front terminals with Mounting Brackets

Note: 1. DC inputs not included in safety standard approvals.
2. At $100 \%$ load for rated input voltage ( 100 VAC or 200 VAC).
3. The output specification is defined at the power supply output terminals.
4. For resetting, turn OFF the power supply, leave for more than three minutes, and then turn ON the power supply.
5. For resetting, turn OFF the power supply, leave for more than one minutes ( 90 seconds min. for the $300-\mathrm{W}$ models and 3 minutes min. for the 600-W models), and then turn ON the power supply.
6. To ensure the Emission Enclosure rating ferrite ring cores (recommended model: S82Y-JC-T) should be used on all cabling.
7. To ensure the Emission AC Mains rating for EN50081-1 (only for 200-VAC input), a nose filter (recommended models: S82Y-JF3-N for 300-W, S82Y-JF6-N for 600-W) should be used on the input lines.
8. With UL508, 150-W connector type has "Recognized" approval.
9. The weight indicated is the weight of the open-frame type.

## Reference Value

| Item | Value | Definition |  |
| :--- | :--- | :--- | :--- |
| Reliability (MTBF) | 135,000 hours | MTBF stands for Mean Time Between Failures, which is <br> calculated according to the probability of accidental device <br> failures, and indicates reliability of devices. Therefore, it does <br> not necessarily represent a life of the product. |  |
| Life expectancy | $10-/ 25-/ 50(5,12 \mathrm{~V})-/ 100(5$, <br> $12,15 \mathrm{~V})-/ 150-\mathrm{W}$ Models | 8 yrs. Min. | The life expectancy indicates average operating hours under <br> the ambient temperature of 40 ${ }^{\circ} \mathrm{C}$ and a load rate of $50 \%$. <br> Normally this is determined by the life expectancy of the <br> built-in aluminum electrolytic capacitor. |
|  | $50(24 \mathrm{~V})-/ 100(24 \mathrm{~V})-/$ <br> $300-/ 600-\mathrm{W}$ Models | 10 yrs. Min. |  |

## Engineering Data

Standard Installation

Note: The derating curve shown is for standard installation. The derating curve depends on the mounting direction of the Power Supply.

Standard Installation

Note: The derating curve shown is for standard installation. The derating curve depends on the mounting direction of the Power Supply.

## 300-W Model

Standard mounting

Parallel Operation

Standard Mounting

Note: Provide a minimum clearance of 20 mm between the Power Supplies.

## - Overload Protection

## 10- to 300-W Models

The Power Supply is provided with an overload protection function that protects the load and the power supply from possible damage by overcurrent. When the output current rises above 105\% of the rated output current ( $105 \%$ to $160 \%$ of the rated output current for 50 ( 24 V )-W and $100(24 \mathrm{~V})$-W models), the protection function is triggered, decreasing the output voltage. When the output current falls within the rated range, the overload protection function is automatically cleared.

## 600-W Models

If an excessive current flows for 5 s or more, the output will be turned off and simultaneously protection-ON alarm indicator will be lit. To reset the S82J, turn off the input voltage, leave the S82J for at least three minutes, and then apply the input voltage again.
Note: Do not continue using the S82J with the output terminals short-circuited or the overcurrent condition continued otherwise the internal elements of the S82J may be damaged or broken.

## ■ Overvoltage Protection

## 100 (5, 24 V)-W Models

The Power Supply is provided with an overvoltage protection function that protects the load and the Power Supply from possible damage by overvoltage. When the output voltage rises above a set value ( $120 \%$ of the rated output voltage), the protection function is triggered, shutting off the output voltage. If this occurs, reset the Power Supply by turning it off for 1 minutes min. and then turning it on again.

## Overheat Protection Function

## 600-W Model Only

If the internal temperature of the S82J rises excessively as a result of fan failure or any other reason, the overheat protection circuit will be triggered to protect the internal elements of the S82J and simultaneously a protection-ON alarm indicator will be lit. To reset the S82J, turn off the input voltage, leave the S82J for at least three minutes, and then apply the input voltage again.

■ Inrush Current, Rise Time, Hold Time

## 300- and 600-W Models

If a voltage that is $120 \%$ of the rated output voltage or above is output, the output voltage will be turned off and simultaneously protec-tion-ON alarm indicator will be lit. To reset the S82J, turn off the input voltage, leave the S82J for at least three minutes if it is a $600-\mathrm{W}$ model or at least 90 seconds if it is a $300-\mathrm{W}$ model, and then apply the input voltage again.

Noise Filter
S82Y-JF3-N for 300-W Models S82Y-JF6-N for 600-W Models

Front-mounting Bracket for 100-W, 24-V (F-type)

## S82Y-J10F

## Mounting Holes

Note: The Front Mounting Bracket cannot be used for 5-, 12-, or 15-V S82J (100-, 150-W models).

## Installation

10-/25-/50-/100-/150-W Models
Note: $10-/ 25-/ 50-/ 100(24 \mathrm{~V})$-W models are available only as Front Terminal Models.

## Connectors

| Connector | Connector on the PCB side | Housing | Terminal |
| :--- | :--- | :--- | :--- |
| Input | Wafer (Made by Molex) 5277-04A-RE | Housing (Made by Molex) 5196-04-RE <br> or 5196-04 | Terminal (Made by Molex) 5194T or <br> $5194 T L$ |
| Output | Tab header (Made by Nippon AMP) <br> $1-178140-5$ | Rise housing (Made by Nippon AMP) <br> $1-178129-6$ | Rise contact (Made by Nippon AMP) <br> $1-175196-5$ or 1-175218-5 |

Note: The permissible current of the output connector is 8 A per pin.

## 300-W Models

1. DC Output Terminals: Connect the load lines to these terminals.
2. Input Terminals: Connect the input lines to these terminals.

Note: A fuse is inserted into the AC (L) side.
3. Ground Terminal (GR): Connect a ground line to this terminal.
4. Input Voltage Terminals: Short-circuit the terminals if the input is 100 to 120 VAC and open the terminals if the input is 200 to 230 VAC
5. Output Indicator (DC ON): Lights while a Direct Current (DC) output is ON.
6. Output Voltage Adjuster (V.ADJ): It is possible to increase or decrease the output voltage by $10 \%$.
7. Protection-ON Alarm Indicator: The red indicator will be lit if the overvoltage (for a 300-/600-W model) or overheat protection (for a $600-\mathrm{W}$ model) circuit is triggered. This indicator will also be lit when overcurrent (for a 600-W model) is detected.
8. Parallel/Single Operation Selector: Set the selector to PARALLEL if the Units are in parallel operation.

NC Terminals: Leave unconnected.

## Precautions

## Mounting

To improve and maintain the reliability of the Power Supply over a long period of time, adequate consideration must be given to heat radiation.
The Power Supply is designed to radiate heat by means of natural air-flow. Therefore, mount the Power Supply so that air flow takes place around the Power Supply.
When mounting the Power Supply, mounting it to a metal plate is recommended.
When mounting two or more Power Supplies side-by-side, allow at least 20 mm spacing between them, as shown in the following illustration.
Forced air-cooling is recommended.

## Mounting Methods

The following mounting methods are available.
10-/25-/50-/100 (24 V)-W Models
(A) Side mounting
(B) Bottom mounting
(C) Front mounting (see Accessories)

100 (5, 12, 15 V)/150-/300-/600-W Models
(A) Side mounting
(B) Bottom mounting (secured with screws from the inside of the Switching Power Supply)
(C) Bottom mounting (secured with screws from the back of the Switching Power Supply)

(D) Front mounting

Front mounting is possible with the mounting brackets provided. Refer to Dimensions.

## Generating Output Voltage ( $\pm$ )

An output of $\pm$ can be generated by using two Power Supplies as shown below, because the Power Supply produces a floating output.

If operation amplifiers as loads are connected in series, connect a diode between the positive and negative output terminals of each Switching Power Supplies as shown in the illustration below. Without these diodes, the Power Supplies may not start when power is turned on, possibly damaging internal circuits over a period of time.
Use Schottky barrier diodes with a low forward voltage ( $\mathrm{V}_{\mathrm{F}}$ ). Other types of diodes will not be effective.
Guidelines for the dielectric strength and current of the diodes are as follows:
Dielectric strength: At least twice the rated output voltage of the Power Supply
Forward current: At least twice the rated output current
No diodes are required for models that allow series operation.

## Series Operation

Only models with power ratings of $50(24 \mathrm{~V}) / 100 / 150 / 300 / 600 \mathrm{~W}$ allow series operation.
As shown in the following diagram, the output voltage from each Switching Power Supply can be added.

With the S82J-05024 $\square$ or S82J-10024 $\square$, if the load is shorted a reverse voltage may result in the Power Supply causing deterioration and damage. It is recommended that diodes are connected as shown in the previous diagram ( $\mathrm{D}_{1}, \mathrm{D}_{2}$ ).

## Parallel Operation

Only $300-$ and $600-\mathrm{W}$ models can be in parallel operation. Do not operate any other models in parallel. The output of the models in parallel operation is a maximum of $80 \%$ of the rated output.
Set the parallel operation selector to PARALLEL if the Units are in parallel operation and make sure that the thickness and the length of all wires connected to the load are the same to ensure that the wires will have no voltage drop differences.

## Fan Replacement

The service life of the fan is approximately 50,000 hours (at $25^{\circ} \mathrm{C}$ ). The service life varies, however, depending on the ambient temperature or other surrounding environmental conditions such as dust. As a preventive maintenance measure, replace the fan within two years if it is used at an ambient temperature of $40^{\circ} \mathrm{C}$.
Fans are available as replacements.

Fan Set:
Fan (above), four M4 $\times 35$ sems screws, instruction sheet, and packing case
Replace the fan as shown in the following illustration.

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.
To convert millimeters into inches, multiply by 0.03937 . To convert grams into ounces, multiply by 0.03527 .
